KETRON
BEST NATURAL SOUND

SD2 ORCHESTRAL WIZARD

The KETRON **SD2** Orchestrational Wizard is a pocket size sound module designed for all PC and Midi applications. Equipped with a new powerful sound engine, including a professional Stereo Grand Piano sound over 88 notes, huge Orchestral voices such as Saxophones, Brass, Woodwinds, Guitars, Accordions, Organ Digital Drawbars and many others, the **SD2** has all the latest features for recording, programming and live performances. The quality of the Solo instrumental Voices (following the traditional KETRON Best Natural sound heritage) is a remarkable advantage of the **SD2**. In addition, the **SD2** includes very distinctive Audio Drum and Percussion Loops selected from Slow, Jazz, Latin, Acoustic, Traditional and Dance styles. Used in conjunction with a Computer, Master keyboard, Midi accordion or Midi guitar, the **SD2** offers an "all-in-one" great sound resource that can be used to greatly enhance standard Midi files, as well as for Home and Studio compositions and recordings. Its Midi capability allows for control of up to 32 Midi channels and DSP effects such as Reverb, Chorus, Delay and Distortion. A very useful (optional) USB to Midi cable also allows

the **SD2** to communicate fluently with any laptop, which might normally not be equipped with a Midi Interface. Special configurations with the sound Map (Templates) are provided so the instrument can easily 'work' with the most commonly used sequencer programs such as Cubase®, Logic®, Cakewalk® as well as the complete **SD2** Drum Loop Library. Templates and Loop Libraries can be downloaded free of charge from the KETRON Internet site www.ketron.it.

USB to Midi cable (optional)
